

Sailing and Fishing Boats 2017

There are two fundamental styles of angling from a drifting boat but both will be drifting **with** the wind.

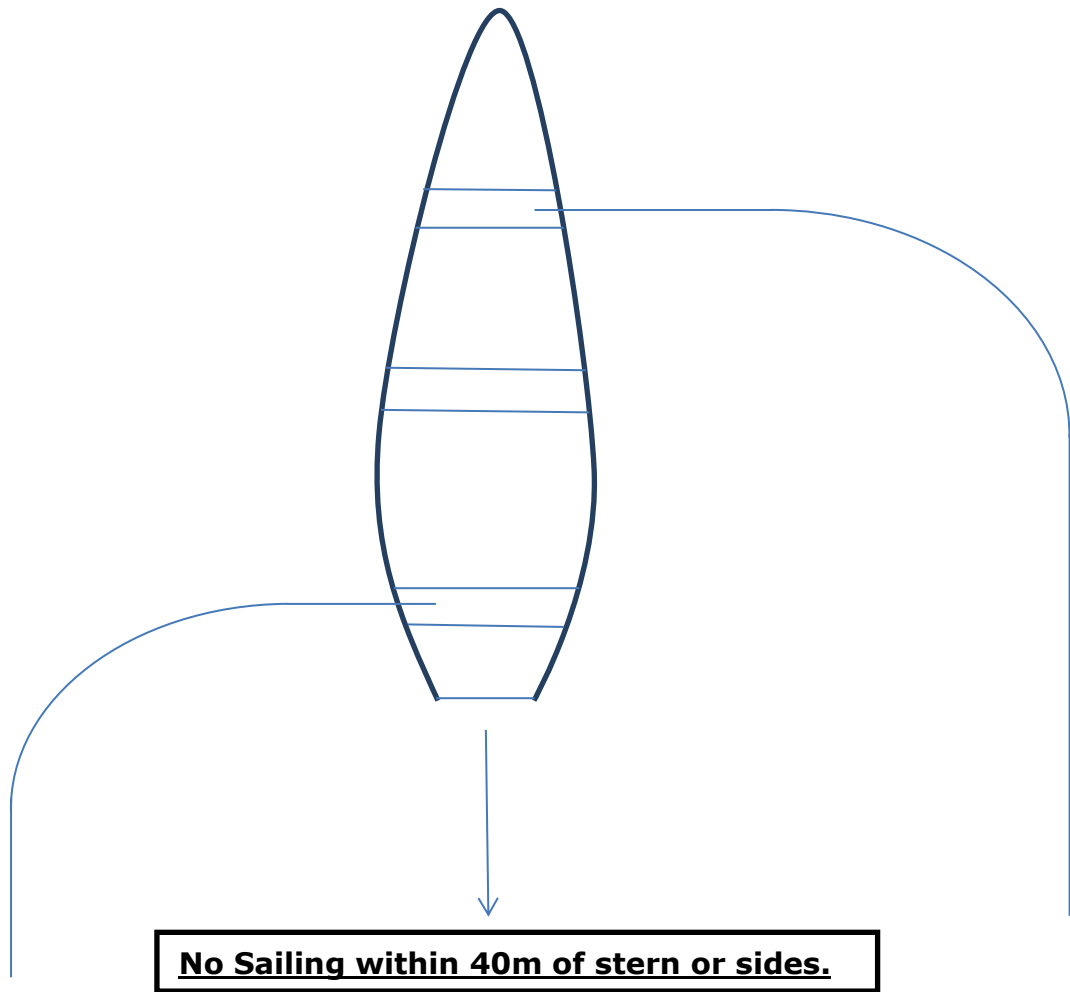

- During casting up to 40m of line can be in the air both **in front** and **behind** the boat (forward and back cast). **Think for your safety.**
- If an angler's line is caught you can be held responsible which can be very costly.

1. Broadside Drifting or 'Loch style'

2. Rudder Angling

- The line is cast out the side of the boat and allowed to 'swing' behind the boat in an arc.
- Again up to 40m of line can be in the air on both sides of the boat during casting. **Think for your safety.**

We want everyone to enjoy the reservoir and be courteous to other users. 40 meters is 8 fishing boat lengths.

Thank you.
